Some Organic Solvents Resin Monomers And Related Compounds

Monomeric acrylic esters are produced commercially by several processes based on ethylene cyanohydrin, acetylene, β -propiolactone (see IARC, 1974a) and ethylene oxide (see IARC, 1985a, 1987g).

Download Ebook Some Organic Solvents Resin

The acetone-cyanohydrin process is the major method for the production of monomeric methacrylate esters (Allyn, 1971).

Solvents, Resin
"bonderizer" bonding
agents (spelled dentin
bonding agents in
American English) are
resin materials used to
make a dental
composite filling
material adhere to
both dentin and
enamel. Bonding
agents are often
methacrylates with
some volatile carrier
and solvent like
acetone. They may
also contain diluent
monomers.

Polystyrene (PS) / , p b
l i ' s t a i r i : n / is a
synthetic aromatic
hydrocarbon polymer
made from the
monomer known as
styrene. Polystyrene
can be solid or foamed.
General-purpose
polystyrene is clear,
hard, and rather brittle.
It is an inexpensive
resin per unit weight.

Many epoxy products also contain additives such as organic solvents, fillers such as fiberglass or sand, and pigments. See the box on page 2. When epoxy resin systems are used, single molecules (monomers) of the epoxy resin chemical and the curing agent combine to form long chains of molecules (polymers).
